

CAMERA

CHECK LIST

BASIC FUNCTIONALITY

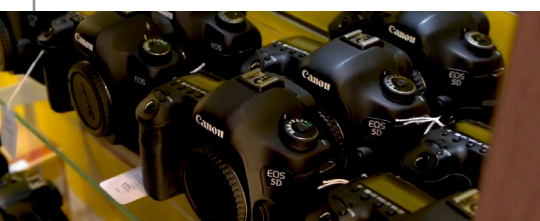

- ☐ Ensure the camera powers on, takes photos, and focuses correctly.
- ☐ Test in manual mode, adjusting aperture, shutter speed, ISO, and white balance (WB).
- ☐ Confirm card slots accept memory cards and can record images.
- ☐ Verify all menu buttons work and are not sticky.

PHYSICAL CONDITION

- ☐ Battery Compartment: Check inside the battery compartment and battery for any signs of corrosion. If corrosion is present, do not proceed with trade-In.
- ☐ Rubber Casing: Inspect the rubber casing to ensure it is not peeling or damaged by a sunlight, general wear or other chemicals.
- ☐ Sensor: Check if the sensor is clean. If the sensor is dirty, consider reducing the trade value by the cost of having the sensor cleaned.

Here's a step-by-step guide for taking a quick test shot to check for sensor issues:

1. Make sure a lens is attached to the camera.
2. Adjust the aperture to a small value, such as f/16 adjust the Iso to as low as possible and the shutter speed to multiple seconds.
3. Point the camera at a bright, evenly lit subject, like a piece of paper or a white wall.
4. Take a photo Examine the image on the camera's screen or on a computer.
5. Identify Issues
 - Small Dark Spots: Likely dust, which can usually be removed.
 - Long Curvy Lines: Could be hair on the sensor.
 - Large Spots: Might indicate oil on the sensor.

EXTERNAL SIGNS OF USAGE

- ☐ Normal wear and tear (scratches, loose rubber) is acceptable but may reduce the value.
- ☐ Be cautious of any signs of physical damage or impacts that could affect internal mechanics.

LENS ASSESSMENT

- ☐ Focus and Zoom: Ensure the lens focuses correctly and that the focus and zoom rings move smoothly. If applicable, check the aperture ring.
- ☐ Mould Check: Inspect lenses thoroughly for mould. If mould is present, do not proceed with trade-In.

ACCESSORIES AND COMPLETENESS

- ☐ Battery and Charger: Confirm the camera comes with a charger and battery. If missing, reduce the trade value by the cost to replace them.
- ☐ Additional Accessories: Note any supplied accessories (e.g., filters, straps, extra batteries), but do not assign extra value to them.
- ☐ Warranty and Documentation: Retain any warranty cards, customer receipts, or details of prior service if available.

TECHNICAL CHECKS

- ☐ Shutter Count: Although not a compulsory test when taking in a second-hand camera. It is recommended to test the shutter count using brand-specific methods or websites like <https://www.camerashuttercount.com/>
- ☐ Its important to note that currently you are unable to test canon Shutter counts using third party software.
- ☐ Reset Camera: Reset the camera to factory settings after completing all checks.

FINAL CONSIDERATIONS

- ☐ Age and Ownership: Consider the camera's age and the number of previous owners. Multiple owners in a short period may indicate potential issues.
- ☐ Mechanical Condition: Test all buttons and dials to ensure they function smoothly without stickiness or resistance.

This checklist will help ensure a thorough evaluation of used cameras, covering both functionality and physical condition.
